Troubleshooting

Memory card is inserted, but the photo frame is not able to read it

- Use only SD/ MMC/ MS memory cards containing photos in JPEG format. Non-JPEG files are shown as “**Not Support**” in Thumbnail mode.
- Check that the memory card is inserted correctly.

Screen is blank

- Check that you have turned **ON/OFF** to **ON**
- Check the AC adapter connection is secure between your photo frame and power outlet.

Why do some photos load faster than others?

- Higher resolution photos take longer. Use photos with lower resolution to speed up the loading time. The optimum resolution is 800 × 600, and the maximum resolution supported is 8000 × 8000 pixels.

Cautions and Warnings

- To reduce the risk of electric shock, do not remove the cover or back. There are no user-serviceable parts inside. Refer servicing to qualified personnel.

- Do not expose the frame to rain or moisture to prevent fire or electric shock hazard.
- Do not insert any foreign objects into the frame through openings; do not spill or spray any liquids on or in the frame.
- Do not place anything heavy on the frame.
- To ensure proper ventilation and proper operation, never cover or block slots or openings. Keep the frame away from open flames (fires, candles, etc.), direct sunlight, and heat sources such as radiators or stoves.
- To avoid damaging your photo frame, use the provided power adapter or an adapter with proper specifications.
